

Abdulla Sajad

Software Engineer

+91 9207761088 | abdullasajad01@gmail.com | linkedin.com/in/abdullasajad | github.com/sajadinmaker | sajadinmaker.github.io

SUMMARY

Software Engineer with production experience building full-stack and backend systems, including AI/LLM infrastructure such as RAG pipelines, vector search, and scalable APIs. Shipped multiple end-to-end products independently and while leading a team of three engineers, from architecture through deployment.

EDUCATION

Sree Narayana Guru College of Engineering and Technology <i>B.Tech in Computer Science and Engineering, CGPA: 7.1/10</i>	2022 – 2026 Kerala, India
Vadi Husna Public School <i>Higher Secondary – Computer Science</i>	2020 – 2022 Kerala, India

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL
Backend: FastAPI, Node.js, Express, REST APIs, Microservices, JWT, RBAC, SQLAlchemy, Async Programming
Frontend: React, Next.js
Databases & Infrastructure: PostgreSQL, Redis
AI/LLM: RAG, LangChain, Vector Search (FAISS), Embeddings
DevOps: Docker, GitHub Actions, CI/CD, Linux, Monitoring & Observability

PROJECTS

- EsenceLab** | *Next.js 15, TypeScript, Express, FastAPI, Supabase, Groq, GitHub Actions* | *GitHub* | *Live* 03/25 – 01/26
- Architected a 3-service microservices system (Next.js, Express, FastAPI) on Vercel/Render with JWT auth, rate limiting, audit logging, and p95 latency alerts.
 - Built a full-stack AI hiring platform with a Groq-powered LLM resume parser and skill-matching engine, with RBAC across student, recruiter, and admin roles. Won 2nd Prize at Innovision (30+ teams).
- Lexora AI** | *Python, FastAPI, LangChain, OpenAI, FAISS, Redis, Celery, Prometheus* | *GitHub* 02/26 – 05/26
- Engineered JWT auth with Redis-backed token revocation and refresh rotation; built Redis caching and Celery async ingestion pipelines; validated with a 31-test async suite.
 - Built a multi-tenant RAG backend using per-user FAISS index isolation, LangChain, and OpenAI, instrumented with Prometheus metrics and structured logging.
- neuDB** | *Python, FastAPI, PyPI, Embeddings, Semantic Search* | *GitHub* | *PyPI* 06/26 – Present
- Built and published an open-source, zero-dependency, file-based AI-native database engine to PyPI, supporting embedding storage and cosine-similarity semantic search with a text-search fallback.
 - Implemented multi-user session/memory schemas and a FastAPI HTTP layer; built an agent-memory loop integrating OpenAI-compatible APIs and local LLMs (Ollama) for long-term conversational memory.

EXPERIENCE

- Software Engineer** 06/23 – Present
Independent Software Engineer Remote
- Built and deployed a full-stack order management and real-time tracking system (Next.js, Express, PostgreSQL, Supabase) for a college institution as sole engineer, replacing manual spreadsheet workflows.
 - Enabled a local retail brand's shift from offline-only sales to a digital storefront by building and deploying an e-commerce platform (Next.js, Express, Supabase) with catalog management and secure checkout.

ACHIEVEMENTS

- Led a 3-engineer team to build EsenceLab, winning 2nd Prize at the Innovision Project Competition, SNGCET (30+ teams).
- Published neuDB, an open-source AI-native database engine, on PyPI.
